Additional Information:

Effects of Freezing on Eye Saline Concentrate
Freezing Point: 10 degrees F is the point where this product freezes solid, based on tests conducted by the manufacturer of the liquid.

Sample bottles of Eye Saline Concentrate have been exposed to freezing conditions a number of times and allowed to thaw in order to test for degradation or breakdown of the product. No degradation or breakdown of eye wash has occurred under these circumstances.

While liquid product is not harmed by freezing and sub-freezing temperatures, consideration should be given to the examination of the container/closure system (bottling) of the product to ensure that the bottle/cap has not been compromised. The bottle/cap and seal must be intact for assurance of continued sterility.

Neutralizing Effects
Eye Saline Concentrate is a buffered, isotonic, sterile saline solution, balanced to neutral pH 7. Being a neutral pH solution, acids or caustic liquid, thus lowering or raising the pH of the combination of fluids.
